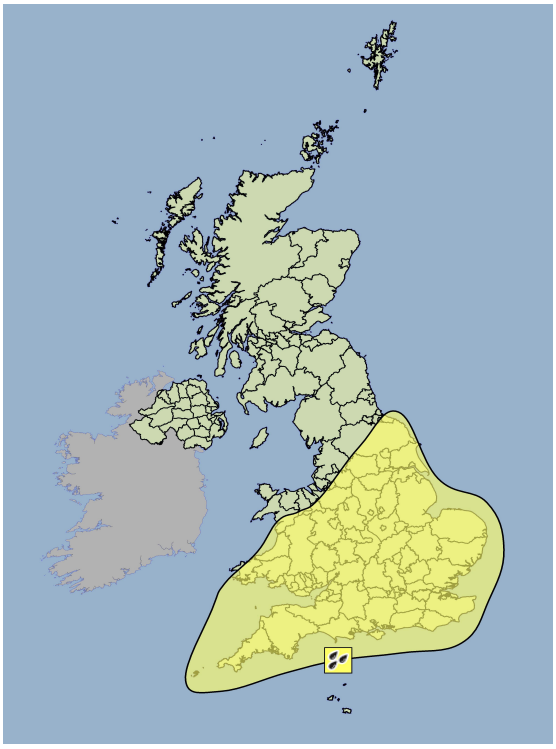
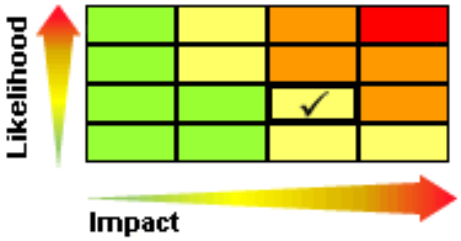
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
An area of low pressure over northern France will extend into eastern England tonight. The very warm air in the system has a high water loading, giving the potential for very large rainfall rates. More than 30 mm of rain may fall in a relatively short space of time in some places whilst locally in excess of 70 mm is possible in just a few hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:30 on Thu, 13th Aug 2015** until **23:50 on Thu, 13th Aug 2015**

An area of heavy and thundery rain over southern England will push erratically northwards during the day bringing the potential for torrential downpours in places.

The public should be aware of a significant risk of localised disruption due to surface water flooding. Lightning and hail are likely to be additional hazards.

**For more details please go to:**
